## ***DETAILED ACTION***

### ***Claim Objection***

1. Claims 4 is objected to under 37 CFR 1.75 because of the following informalities

For claim 4 line 1, the occurrence of “ four peaks” seems to refer back to “four peaks “ previously recited in claim 3 line 5, if this is true, it is suggested to applicant to change “four peaks” to --the four peaks--. Similar problem exist in claim 5 line 1.

For claim 5 line 1, the occurrence of “ synchronization” seems to refer back to “synchronization “ previously recited in claim 3 line 1, if this is true, it is suggested to applicant to change “synchronization” to --the synchronization --.

For claim 6 line 2, the occurrence of “ number” seems to refer back to “a number “ previously recited in claim 6 line 2, if this is true, it is suggested to applicant to change “a number” to --the number --.

### ***Claim Rejections – 35 USC§ 112***

2. The following is a quotation of the second paragraph of 35 U.S.C 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2609

3. Claims 6 is rejected under 35 U.S.C 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

For claim 6 line 1, the occurrence of "the threshold" has no antecedent basis.

### ***Allowable Subject Matter***

4. Claim 6 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
5. Claims 1-5 and 7-14 are allowed
6. The following is a statement of reasons for the indication of allowable subject matter  
For claim 1-14 the prior art fail to teach inverse Fast Fourier-transforming polyphase code sequences whose number is the same as half of an IFFT size using Hermitian symmetry; replicating output signals from the transforming step for a predetermined number of times to provide replicated signals and placing the replicated signal in serial.

### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Linnartz et al (US 2002/0181549 A1), Rhodes Valentine (US 2004/0264362 A1), Dey et al (US 2005/0073946 A1), Fang et al (US 2005/0111590 A1), Izumi (US 7085223 B2) are recited to show a preamble for an OFDM signal for channel estimation and synchronization.

Art Unit: 2609
